

SHUBHAM PATEL

Full-Stack .NET Developer | ASP.NET Core | React | Distributed Systems

shubham.patel.swe@gmail.com • [LinkedIn](#) • [GitHub](#) • [iamshubham.tech](#) • Lucknow, India

PROFESSIONAL SUMMARY

Full-Stack .NET Developer with 3+ years of professional experience delivering production systems for high-traffic government and enterprise platforms — including a statewide education platform (2M+ users) and a national sports federation portal. Hands-on background spanning an apprenticeship, full-time employment, and a B.Tech completed alongside work. Experienced in ASP.NET Core, CQRS architecture, RabbitMQ-based async workflows, SQL Server optimization, and React.

TECHNICAL SKILLS

Languages:	C#, TypeScript, JavaScript, SQL
Backend:	ASP.NET Core, ASP.NET MVC, Entity Framework Core, MediatR, RabbitMQ, JWT/OAuth
Frontend:	React, HTML5, CSS3, Responsive Design
Architecture:	Clean Architecture, CQRS, SOLID Principles, Distributed Systems
Database:	SQL Server, Redis
DevOps & Tools:	Docker, Git, GitHub Actions (CI/CD), Azure Fundamentals, Postman
AI & Local LLM:	LM Studio, Cline, Prompt Engineering, Model Quantization (Q4_K_M)
Integrations:	Aadhaar API, DigiLocker, Payment Gateways, GPS APIs, SMS Gateway

PROFESSIONAL EXPERIENCE

Software Developer | Technosys Services Pvt Ltd, Lucknow

March 2023 – Present

Tech Stack: ASP.NET Core, ASP.NET MVC, C#, TypeScript, React, SQL Server, RabbitMQ, Redis

- Designed and delivered production features across three high-scale government platforms serving a combined user base of 3.5M+, working across the full stack from database to React UI.
- Reduced API response latency by 40% through SQL Server query optimization and Redis-based caching for datasets exceeding 100,000 records.
- Implemented RabbitMQ-based async processing pipelines and MediatR-driven CQRS APIs, improving system reliability and reducing post-deployment production incidents.

Apprentice Developer | Software Development Firm, Lucknow

Aug 2022 – Feb 2023

6-month apprenticeship undertaken immediately after Diploma in IT

- Assisted in building and testing web application features under senior developer mentorship.
- Gained foundational exposure to .NET backend development and SQL Server in a production team environment.

KEY PLATFORMS & CONTRIBUTIONS

Veerangana Portal — Women Empowerment Platform · 1.5M+ Annual Users

- Built reusable React component library and scalable ASP.NET Core APIs following CQRS and Clean Architecture patterns, supporting multiple program workflows used by government administrators statewide.
- Collaborated on frontend state management optimizations that improved page load consistency and reduced UI re-render cycles across high-traffic usage periods.

Gyan Samiksha / PrernaUP — Statewide Teacher Training & Assessment Platform · 2M+ Users

- Delivered end-to-end training and assessment workflows including module delivery, evaluation tracking, and result reporting for teachers across Uttar Pradesh.
- Optimized backend API performance and frontend state management, contributing to 99.9% platform uptime during peak government-mandated training rollouts.

SGFI — School Games Federation of India — *National School Sports Registration Portal*

- Architected and delivered full-stack registration portals for national-level school sports events, integrating Aadhaar/DigiLocker identity verification, payment workflows, and GPS-based venue features.
- Designed a scheduled SMS notification system using RabbitMQ and ASP.NET Core background services: on successful player registration, a confirmation message containing registration number, player name, enrolled events, and scheduled dates is queued and dispatched each morning — ensuring players receive timely reminders without manual intervention.
- Implemented JWT-secured role-based authentication covering administrators, coaches, and players with fine-grained access control across portal sections.

Mission Bharosa — *School Bus Tracking & Safety Platform · Multi-School Deployment*

- Built a real-time school bus tracking system deployed across multiple schools, integrating GPS APIs to stream live bus locations and display route data to parents via a React frontend.
- Developed driver identity management including digital ID card generation, driver profile records, and role-based portal access for school administrators.
- Enabled parents to view their child's assigned bus, driver details, and live GPS location — improving transparency and safety for daily school commutes.

TECHNICAL PROJECTS

Event Management System — *Internal Company Product · In Development*

ASP.NET Core · React · JWT · SQL Server · Role-Based Access Control

- Building a full-featured event platform covering venue listings, event scheduling, ticketing, and attendee management for internal company use.
- Architected a JWT authentication and role management system from scratch — supporting multiple user roles (organizer, attendee, admin) with protected React routes, refresh token workflows, and session handling.
- Designed the database schema and REST API layer to support concurrent bookings, seat availability checks, and ticket issuance with transactional integrity.

Local LLM & Agentic Development Workflows — *Productivity Tooling*

LM Studio · Cline · Prompt Engineering · Q4_K_M Quantization

- Set up a local AI-assisted development environment using LM Studio and Cline, integrating quantized LLMs (Q4_K_M) directly into the coding workflow for code generation, refactoring suggestions, and documentation.
- Applied model quantization and prompt engineering techniques to run capable models on local hardware — eliminating cloud API dependency for day-to-day development assistance.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering

2023 – 2026

Dr. M.C. Saxena Group of Colleges, Lucknow (Completed while working full-time)

Diploma in Information Technology

2019 – 2022

CSJM Government Polytechnic, Ambedkar Nagar
